## Amendments to the Specification:

Please replace paragraph 2 beginning at page 24, with the following rewritten paragraph:

--In one method of outputting the time based information through the use of output controls, the play control **250** is activated and then the rewind control **252** or forward control **254** chosen to move to a position that is a-immediately prior to the appropriate position for capture. The stop control **256** is selected and the play control **250** is reactivated. When the scene of interest is displayed or a particular portion of audio is played, the clip may be edited.--

Please replace paragraph 4 beginning at page 25, with the following rewritten paragraph:

--Another means to move a reference element is though through a cut and paste command. The reference element is selected and is made to disappear from the screen by activating a cut command. Activation of the cut command may occur by the user choosing a menu option, keyboard stroke, etc. An intended place for the relocation is selected and a paste command activated to prompt the reference element to reappear in the selected place.--

Please replace paragraph 3 beginning at page 36, with the following rewritten paragraph:

--The software components may be provided in as-a series of computer readable instructions that may be embodied as data signals in a carrier wave. When the instructions

are executed, they cause a processor, such as through a browser to perform the capture and editing steps as described. For example, the instructions may cause a processor to communicate with an information source, provide capture information from the time based stream of information on a first portion of a display, provide process information for constructing the presentation on a second portion of the display; and provide at least one enabled control element. Such instructions may be presented to the processor by various mechanisms, such as a plug-in, ActiveX control, through use of an applications service provided or a network, etc.—

Please replace paragraph 3 beginning at page 17, with the following rewritten paragraph:

- - The user directs the editing process by employing control elements, i.e. editing tools, that are provided by the processing system to maneuver the references. Typically, at lease least some of the control elements are displayed on the user interface. For example, one control element is in the form of an extended window, referred to as a time line or track. Such time lines represent the time course of a presentation and the position of each reference element along the time line dictates the order of the associated clip and edit feature in the presentation. Other control elements include edit windows that may permit edit features to be added to the references, windows for viewing the presentation or portions thereof, menus, buttons, etc.- -
